

ACC COLUMBIA Jet Service GmbH performs maintenance on Embraer Legacy 600

In times of ongoing financial ambiguities more and more European aircraft owners trust in cost-effective long range aircraft like the Legacy models of the Brazilian manufacturer Embraer. As a fleet enlargement leads to an increased maintenance demand, ACC COLUMBIA Jet Service GmbH has extended its EASA part-145 approval to the Embraer Legacy 600/650 in March 2013. The team around Michael Kuhn, who moved over from an Authorized Embraer Service Center to ACC COLUMBIA Jet Service, has already acquired a number of maintenance projects.

In March and April this year **ACC COLUMBIA Jet Service** performed scheduled and unscheduled maintenance at Kaohsiung International Airport (KHH), Taiwan under support of **Q.C.M. maintenance AG**.

The motivated team carried out all involved tasks in two weeks. All special tools, consumables and parts were shipped from the facilities Cologne and Hanover or from the Embraer Service Center in Singapore to KHH.

Furthermore the Legacy team also performed several AOG supports for various Customers in the European region. The AOG support for Legacy is available 24/7 under **+49 (0)151-140 025 08**.

The set goal of the near future will be to expand the client base and to further gain experience on Embraer Legacy aircraft.

ACC COLUMBIA Jet Service is one of the leading aircraft maintenance companies in Germany with major facilities at Cologne/Bonn airport and Hanover airport as well as line stations in Luxembourg and Cyprus. Besides the Embraer Legacy 600/650 their part-145 approval also covers a huge number of Gulfstream, Bombardier, Cessna, Dassault Falcon and Hawker Beechcraft models. Beyond that they hold part-21 and part-M approvals.
